

Varun Sai

 (+91) 7893396275

 varun.tecops@gmail.com

Professional Summary:

With an overall experience of **7+ years in technical industry** gained knowledge and expertise exposure in various practices related to **DevOps, DevSecOps, Cloud Operations** where i have specialized in filling gaps between development, operations, security and software delivery using different set of tools and methodologies in SDLC process.

Having exposure to latest **Gen AI technologies in prompt engineering** for model training using the **LLM, RLHF** and reverse prompting methodologies for implementing training to an **AI based Chat tool for Amazon service specific**.

Worked on infrastructure as a code using CloudFormation and Terraform tools. Experience in **SCM concepts** such as **branching and merging**. Coordinate with multiple project teams for the build and release management and its requirements.

Have done POC for a few of the project tasks as per the Client requirement. Worked on **configuration monitoring** tools for the servers like **App D, Splunk, New-relic, Nagios**. Also created the Specs for client's reference. Knowledge on Ansible plays for the configuration management. Exposure to **Agile way** of working and its methodologies.

Design and implementation of highly available cost effective and fault tolerant applications using **ALB, ASG, CloudFront** and **Route53** services which improves the faster **application performance** by 40-50%. Deployed the microservices applications using **Kubernetes clusters** for deploying, **scaling**, and managing **containerized applications** on docker, ensuring high availability and **fault tolerant**. Having knowledge on **Docker files** to build Docker images. Creating **Ansible Plays** for the Application Deployment and its components.

Exposure on **DecSecOps** where in which **developed with security configurations** of migrated Servers and Applications from On-premise to AWS cloud using the AWS tools services like **Route 53, Shield, NACLs**. Worked on **incident management** tools like **Service Now, Jira** for application and server related issues.

Using **AIOps** implemented automation of tasks for additions of IPs on E-Commerce website, where **30-40 % of website traffic** will get **increased**. Worked on an **Gen AI** based application using **MLOps** with **LLM** model for data enhancement, data integrations and error validation with AWS services where the **data is filtered using the human feedback method. Which resulted in 60-70 % Simpler data processing for accurate information.**

Technologies:

- GitHub, Git and Bitbucket as a Source code management.
- Jenkins, GitHub Actions, AWS Code Pipeline for CI/CD.
- Maven and MS Build for packing and compiling of software.
- Storing of build artifacts on repos like Nexus, JFrog, Azure Artifacts.
- Middleware tools like IBM WebSphere, Tomcat, NGINX.
- Containerization and Orchestration using the Docker and Kubernetes.
- AppD, Splunk, New-relic, Grafana, CloudWatch and CloudTrail for activity management and log management of users and applications servers.
- Shell, python for scripting.
- Ansible, Terraform, CloudFormation and Terragrunt for Configuration management of infrastructure and servers.
- IBM Db2, MySQL and RDS for database management.
- AWS, Azure and GCP as a cloud service for SaaS, PaaS and Infrastructure usage.

Work Experience:

Cognizant Technology Solutions
DevOps Engineer Hyderabad, IN

Dec 2018 – April 2021

FusionX is a Mapping tool where we need to **enhance the functionalities** for the automation of its functions with the help of **DevOps practices**. Responsible for managing the code in Git. Maintain Source Control Branches, Control engineering teams to access the branches from time to time depending on the release schedules. Used the continuous integration tool **Jenkins to automate the daily build and deployment processes**. **Automated** the process of taking a **backup** of necessary code changes, while debugging an issue **through a script** according to development teams requirements. **Used Jenkins for Continuous Integration and Deployment into Tomcat Application Server. Integrating Nexus with Jenkins to store artifacts.**

Containerizing applications with Docker. Responsible for managing the Docker Private Registry. Created **Docker Files and build images** and push to the Docker Private Registry. Managed Docker orchestration and Docker containerization using Kubernetes. Used Kubernetes to orchestrate the deployment, scaling and management of Docker Containers. AWS Cloud platform and its Services which includes EC2, AMI and S3. **Setting up databases in AWS** using S3 bucket and configuring instance **backups to S3 bucket**. Writing Shell Scripting for automation processing in Jenkins Jobs.

Team Lease Digitals

Software Engineer Bangalore, IN

May 2021 – Sep 2021

Created **JFrog repository** to pull the necessary **artifacts** for the application builds. Worked closely with developers to pinpoint and provide early warnings of common build failures. **Monitoring the Jenkins builds**, environments and troubleshooting the issues in different stages of build and deployment process. Monitor Production Server Health of different parameters (CPU Load, Physical Memory, Swap Memory, Hard disk, Http service and response time). Scheduling the Jenkins Jobs Using Cron Tabs for the Build Process. Troubleshooting the issues for the jobs failed in Jenkins and Fixing them. Configuring AppD for App Servers for the monitoring of metrics and troubleshooting the issue. Performed Branching Strategies for the Developers Code. Having Knowledge on Infrastructure as Code Using Terraform, AWS Cloud Formation. Configured and managed Continuous integration, Continuous deployment and Continuous Delivery pipeline using Git Actions and Jenkins. knowledge on **Linux Administration** tasks.

VHS Consulting India Pvt. Ltd (TCS)

Oct 2021 – July 2022

Support/DevOps Engineer Chennai, IN

Tata Consultancy Services (Converted to Permanent TCS Employee) July 2022 – Mar 2025

Systems Engineer Hyderabad, IN

Worked on **Azure Repos** for creation of Repositories and **Azure Boards** for tracking **day to day activities**. Experience on **Build and Release pipelines** in **Azure DevOps** and Artifact management. Worked on Azure Cosmos DB with SPARK API and imported multiple collections with Azure DevOps pipelines. Managed the migration of a large-scale application **to GCP and AWS**, reducing infrastructure costs by 40% and improving application performance by 30%. Developed and maintained **automated deployment processes**, resulting in a 60% reduction in deployment time and a 50% increase in deployment frequency. Worked on provisioning Azure **APP services & Azure batch pools using ARM templates, creating AKS clusters and deploying applications**. Implemented **backup and disaster recovery plans**, ensuring business continuity and **reducing recovery time by 50%**. Worked on a **migration project of US Based travel company application and its related fleet application**, where servers were laying on the **on-prem** data center of **VMWare**. Which was completely **Restructured and Reprovisioned** on **AWS**. **Provisioned infrastructure on GCP** using **terraform IaC tool**. Worked on **Automation** of tasks like Google Bot IPs in addition to the WAF Rule **reducing 60 % of manual intervention**. Also worked on **Automating of Slack Bot** for the **instance type change** for the EC2 servers reducing 40 % of time and implemented the process of Automating the Disk Volume addition of the EC2 Server which increased 30 % of productivity. As part of **log 4J Vulnerability** upgraded the monitoring tools for the infra and server monitoring tools like AppD, Splunk and New Relic. Configuring the monitoring Tools for the **WMS, OMS, MCO application** on both the **non-Prod** and **Prod Environments**. **Troubleshooting** the error as part of the Build and Deployments, also

Resolving the **P2, P3**. Worked on **IBM WebSphere** for the maintaining of sterling infra-Applications. Conducting Daily Standups as part of work progress and prioritizing the work. Maintaining the **infrastructure** on **Cloud** services such as EC2 Instances, Azure VMs, Google Computes **AMI, IAM, ELB, EBS, S3, CloudWatch**. Configuring the **AMIs** for the **Application Specific** and **DB specific** and troubleshooting.

Delivering the requirement **with in the Business timeline** and keep up the **Quality** without impact on **production**. Handling weekly calls and ensure proactive responding.

LTM(Mindtree)

May 2025 – Present

Specialist Cloud Engineer Hyderabad, IN

Worked on **AWS Cloud infrastructure provisioning** using **Terraform** and **AWS CloudFormation (CFT)** for deploying and managing scalable infrastructure resources.

Automated **daily operational tasks** including **SSM patching, AWS services inventory reporting**, and **AWS Workspace report automation**, reducing manual effort and improving operational efficiency.

Configured and managed **Amazon FSx** for **on-premises archival data storage** and backup integration requirements.

Provisioned and configured **Amazon RDS** and **Oracle databases on AWS** through **CloudFormation templates** based on business and application requirements.

Performed **cleanup of unused AWS resources and infrastructure**, contributing to **FinOps optimization, Trusted Advisor recommendations**, and overall **cloud cost savings initiatives**.

Implemented **RDS database monitoring and alerting** using **AWS CloudWatch, Event Bridge/Event Triggers**, and custom alerts to proactively identify and troubleshoot database-related issues, helping avoid production outages.

Configured **custom event alerts** for **RDS Aurora Auto Scaling Reader instances** to notify teams whenever new reader nodes were added during high-load scenarios, assisting in performance analysis, troubleshooting, and cost tracking.

Developed and maintained **GitHub-based CI/CD pipelines** for **AWS infrastructure automation** and deployment activities.

Configured and onboarded **EC2 servers** into **ScienceLogic monitoring**, including **automatic onboarding automation** for infrastructure monitoring, alerting, and operational visibility.

Troubleshoot and resolved **build, deployment, infrastructure, and production issues**, including handling **P1, P2, and P3 incidents** within SLA timelines.

Improved overall **operational accuracy by 60–70%** through automation and reduced **cloud operational costs by 40–50%** via infrastructure cleanup, optimization, and FinOps activities.

Generated **AWS infrastructure comparison and audit reports** across multiple environments for validation, governance, and compliance purposes. Automated **Active Directory (AD) Domain Join** configuration for **EC2 servers** through scripting and **CloudFormation templates**, ensuring standardized and automated server onboarding.

Certifications:

- ✓ **AWS Cloud Practitioner** (Amazon Certification)
- ✓ **AWS Solution Architect Associate** (Amazon Certification)
- ✓ **AWS SysOps Administrator Associate** (Amazon Certification)
- ✓ **AWS DevOps Engineer Professional** (Amazon Certification)
